Lineman's Double Square Tower Wrench

Two Square Sizes = 1-5/16" and 1-1/2"

52 CAST 15 INCH – 53 CAST 20 INCH
152 STAMPED 17 INCH

The Lowell Tower wrench provides greater flexibility for linemen dealing with the most common nut sizes in pole fasteners. The 1-5/16" x 1-1/2" double square socket allows for tolerances on 1-1/4" square nuts (3/4" bolts) and 1-3/8" square nuts (7/8" bolts). It also fits 1-1/2 inch hex. The Bolt-Thru design allows threaded rod to pass thru the socket so that nuts can be secured on any threaded length. The 152 model has a heavy duty stamped riveted metal handle with vinyl grip. 52 and 53 models are cast iron. All are coated with an epoxy paint for durability and easy cleaning. Designed specifically for utility, construction and maintenance workers, the tower wrench's extended length stands out on the job. We also offer a variety of square and hex sockets.

Bolt Thru design allows bolts to pass completely through the head of the wrench.

Ergonomic handle makes work more comfortable.

Since 1869, Lowell Wrenches have been 100% Made in America in Worcester, MA.
